

ADNEXIO: UX EFFICIENCY TESTING PROTOCOL

Comparative Analysis: Manual vs. AI Itinerary Generation

About Adnexio

Luxury, Redefined by Intelligence.

Adnexio is your private gateway to the most prestigious lifestyle experiences in the Middle East. Developed for the discerning traveler, our platform eliminates the noise of traditional search. By uniquely blending advanced AI with dedicated human concierge support, Adnexio crafts hyper-personalized itineraries in seconds, not hours. Whether it's a private yacht at sunset or a Michelin-starred table in the heart of Dubai, Adnexio ensures your journey is as seamless as it is extraordinary.

Your time is your most precious asset. We're here to help you spend it beautifully.

Objective: To quantify the efficiency gains of the Adnexio AI Concierge. We are measuring the time and accuracy required to plan a 3-day high-end itinerary in Dubai.

1. Tester Profile (Complete per User)

Tester ID:	Tester2	Target Tier:	[✓] Elite
Name / Initials:	Ta	Tech Savvy (1-5):	5
Job / Occupation:	Software Engineer	Age:	30

2. Test Scenario

"Plan a 3-day 'Romantic Anniversary' trip to Dubai. You need to find and book:

- One evening activity with a view.
- One luxury dinner.
- One afternoon relaxation activity.

Goal: The itinerary must feel high-end and cohesive (the activities should make sense together)."

3. Record Sheet: Method A (Manual Selection)

User adds experiences one-by-one using filters and manual date/time input.

Start Time	End Time	Total Minutes	Conflict Count (Overlaps)	Human Errors (Wrong date/price)
14:02	14:19	17	1 (picked overlapping 7 pm slot for dinner and 7 pm dhow cruise on	1 (booked Day 2 slot instead of Day 1 for spa)

4. Record Sheet: Method B (AI Itinerary Generation)

User enters the scenario prompt into the AI Assistant and waits for the streamed result.

Start Time	End Time	Total Seconds	Conflict Count (Overlaps)	Prompt Re-tries
14:25	14:27	104s	0	1 (first prompt omitted "romantic"; refined once

5. Post-Test Qualitative Evaluation

Metric (1-10 Score)	Manual Method	AI Method
Ease of Use	6	9
Confidence in Schedule	7	8
Perceived Speed	5	10

6. Final Evaluation Calculation

$$\text{Time Reduction \%} = [(\text{Manual_Time} - \text{AI_Time}) / \text{Manual_Time}] \times 100$$

Calculated Result:	≈ 89.8 %
